

The **Walltop PowerFence™** System provides effective and discreet protection against break ins, theft, vandalism, and marten bites. Due to its subtle looks, it integrates itself into the landscape or city surroundings. The system can be mounted onto all existing walls, fences, roof edges, crowns, gates, balustrades, and railings.

- Alarm:** Upon fence contact an alarm is triggered that can be connected to a siren or an alarm by mobile.
- Deterrent:** The fence sends out voltage with 7000 Volt, which makes fence contact a painful experience for intruders, and keeps away even the most convinced intruder.
- Safe:** In spite of the voltage power of the system, the contact is painful, but not hazardous to human health.
- Economic:** Power consumption comparable to a 40 W lightbulb.  
Weather resistant and low maintenance.

## Spotlight roof solar areas

Unprotected units

The protection of roof solar areas is a special purpose of use. These are often easily accessible due to low roof heights and especially theft-prone due to their frequently secluded position.

### Marten protection

The Walltop PowerFence™ System also provides effective marten defence. This way you effectively prevent high material damage due to bit through cables.

### Start and end kit

One kit is needed for each fence beginning and end. Two kits are needed for wall distances larger than 30 cm.

### Distance kit

With columns and 300 m extremely tear-resistant, galvanized wire for high towing capacity, sufficient for a distance of 30 m.

### Corner kit

One kit is needed per corner or direction change.

### Energizer-Kit

We provide the matching power generator individually depending on the fence length.

## AVERDE

SECURITY MANAGEMENT SYSTEMS

Whether roof, wall, or fence assembly, you are always on the safe side with the Medal Walltop solutions. Do you have questions concerning the system? Our security team gladly advises you.
